- ✓ The draft NECP includes a good description of policies and measures.
- ✓ It also provides information on the expected impact of planned policies.
- ✓ Greece has undertaken a consultation process with a range of sectors specific actors and civil society groups.
- ✗ While Greece scores highly on process and on policy details, it is very weak on the ambition dimension of this assessment. The non-ETS greenhouse gas target for 2030 appears artificially low, being below Greece's own business as usual projections.
- ✗ The plan does not provide details on the long-term, 2050 dimension.

This scorecard is the outcome of a ranking exercise of the draft National Energy and Climate Plans (NECPs) of the 28 EU Member States. It is based on the information provided directly in the draft NECPs.

The underlying assessment focuses on three core dimensions: the adequacy of the communicated climate and energy targets, the detail of the policy descriptions, and the quality of the NECP drafting process.

It is not a full impact assessment and does not evaluate the likely effectiveness of the presented existing or additional policies or the accuracy of the information provided.

For more information on the analysis carried out please see the report "Planning for Net Zero: Assessing the draft National Energy and Climate Plans", May 2019.
